ABSTRACT. In the present study, new data about the distribution of 27 species of digger wasps (Hymenoptera: Spheciformes: Crabronidae) collected from different regions of province (southeast Iran) are presented. The specimens were collected at 21 localities using Malaise traps during March to September 2017. The identified species belong to three subfamilies: Bembicinae (three genera, seven species), Crabroninae (seven genera, 18 species) and Philanthinae (single genus, two species). Among them, two species, *Gasterosericus moricei* E. Saunders, 1910 and *G. sabulosus* Pulawski, 1995 are newly recorded for the Iranian fauna. Photographic illustrations of morphological characteristics of the newly recorded species are presented.

Key words: Hymenoptera, digger wasps, Crabronidae, new record, Iran

Introduction

The Crabronidae commonly referred as digger wasps are a cosmopolitan family with a worldwide distribution. More than 9000 species belonging to 248 genera and eight subfamilies have been documented worldwide (Pulawski, 2020). Adult Crabronidae feed nectar and pollen from flowers. The females of digger wasps are generally effective predators of insect from different orders or spiders for larval nutrition. These wasps make their nests in the ground, wood or plant stems (Bohart & Menke, 1976).

Iranian Spheciformes have been studied by many researchers (Morice, 1921; Gussakovskij, 1933; de Beaumont, 1957,1970; Pulawski, 1971, 1984, 1992, 2007; Dollfuss, 2006, 2008; Esmaili & Rastegar, 1974; Ebrahimi, 1993, 2000, 2005, 2008, 2014; Ghazi-Soltani et al., 2009, 2010a, 2010b, 2010c; Rezaei & Fallahzadeh, 2015; Atbaei et al., 2015; Jahantigh et al., 2017; Ghahari, 2018; Schmid-Egger, 2004, Schmid-Egger et al., 2016; Sadeghi et al., 2016, 2018a, 2018b, 2019; Fallahzadeh et al., 2006, 2009, 2018; Khosroabadi et al., 2019; Rezaei et

al., 2020a, 2020b). The first checklist of Iranian Spheciformes was published by Jahantigh et al. (2017), who presented 404 species belonging to 71 genera from different parts of Iran. Recently, new contributions to the fauna of Iran were published (Dollfuss, 2018; Sadeghi et al., 2018a, 2018b, 2019; Fallahzadeh et al., 2018; Khosroabadi et al., 2019; Rezaei et al., 2020a, 2020b). The aim of the present paper is to study the Crabronidae fauna of southern areas in Kerman province.

Material and methods

The specimens were collected by Malaise traps at 21 localities in the southern areas of the Kerman province from March to September 2017 (Table 1). Specimens were extracted from the traps mostly every two weeks and stored in 75% ethanol. They were studied using an Olympus SZ60 Stereomicroscope. The dried specimens were pinned and labeled. External morphology was illustrated using an Olympus™ SZCH, equipped with an Omax (18Mp) A35180U3 and Canon™ A750 digital cameras. Morphological terminology follows Bohart & Menk (1976) and other resources; Pulawski, 1995, 2006; Li et al., 2009; Schmid-Egger, 2004, 2011, 2014; Schmid-Egger et al., 2016; Schmidt & Bitsch, 2007; Nemkov, 2016). General distributional for each species were adopted from Pulawski (2020). The voucher specimens were deposited in Zoological Museum of Shahid Bahonar University of Kerman, Kerman, Iran (ZMSBUK) and Department of Plant Protection, Shahid Bahonar University of Kerman (DPPUK). All species were identified by the last author (Christian Schmid-Egger).

Results

In the present study totally 747 specimens of Crabronidae belonging to three subfamilies representing 27 species in nine genera were collected and identified of which two species are new records for Iranian fauna and 20 species new for Kerman province. The genera and species are listed alphabetically. Short morphological characteristics are presented for the newly recorded species.

Family: Crabronidae Latreille, 1802

Genus: *Ammatomus* A. Costa, 1859

Ammatomus coarctatus (Spinola, 1808)

Material examined: (1♀); Iran, Kerman province: Anbar Abad (Bardeh) (loc. 12, Table 1), 05.v.2017, 1♀.

Distribution in Iran: Khorasan-e Razavi, Qazvin (de Beaumont, 1957); Tehran (Pulawaki, 1973); Fars (Atbaei et al., 2015; Rezaei & Fallahzadeh, 2015) and Kerman (current study) provinces .

General distribution: Albania, Algeria, Armenia, Bulgaria, Croatia, Cyprus, Egypt, France, Greece, Hungary, Iran, Israel, Italy, Kazakhstan, Portugal, Romania, Russia, Spain, Tajikistan, Turkey, Turkmenistan, Ukraine, Uzbekistan, Yemen.

Genus *Bembecinus* A. Costa, 1859

Bembecinus iranicus Schmid-Egger, 2004

Material examined: (9♀♀, 2♂♂); Iran, Kerman province: Anbar Abad (Bardeh) (loc. 12, Table 1), 05–23.v.2017, 1♂; Jifott (Baqer Abad) (loc. 1, Table 1), 13–23.v.2017, 1♀, 1♂; Jiroft (Mijan-Sar Asiab) (loc. 3, Table 1), 20.iv–05.v.2017, 1♀; Kahnuj (Qooch Abad) (loc. 15, Table 1), 06–21.iv.2017, 2♀♀; same data, 21.iv–08.v.2017, 2♀♀; Kahnuj (Tomgoran) (loc. 16, Table 1), 15–28.v.2017, 1♀; Kahnuj (Dehkahan) (loc. 14, Table 1), 11–22.iv.2017, 2♀♀.

Distribution in Iran: Khorasan-e Razavi (Schmid-Egger, 2004, 2009; Ebrahimi, 2014); Fars (Rezaei & Fallahzadeh, 2015); and Kerman (current study) provinces.

General distribution: Iran, Saudi Arabia, Turkey, United Arab Emirates.

Bembecinus khuzestani Schmid-Egger, 2004

Material examined: (37♀♀, 4♂♂); Iran, Kerman province: Bam (Dehbakri) (loc. 9, Table 1), 17.vii–26.viii.2017, 1♂, 2♀♀; Jiroft (Baqer Abad) (loc. 1, Table 1), 04–19.vi.2017, 1♀; Kahnuj (Dehkahan) (loc. 14, Table 1), 04–23.v.2017, 3♀♀, 1♂; Kahnuj (Qooch Abad) (loc. 15, Table 1), 21.iv–08.v.2017, 2♀♀, 2♂♂; Manujan (Chah Nasri) (loc. 20, Table 1), 10.iv–05.v.2017, 26♀♀; Manujan (Chermil) (loc. 21, Table 1), 05–22.v.2017, 3♀♀.

Distribution in Iran: Khuzestan (Schmid-Egger, 2004); Fars (Atbaei et al., 2015); Hormozgan (Fallahzadeh et al., 2018) and Kerman (current study) provinces.

General distribution: Iran.

Discussion

Prior to this study, 24 species in 12 genera of Crabronidae were recorded from Kerman province (de [Beaumont, 1970](#); [Pulawski, 1971](#); [Gussakovski, 1933](#); [Ebrahimi, 2014](#)). In the present study, further 20 species are found to be new to the fauna of Kerman which increases the number of species to 44. Two of these species, *Gastrosericus moricei* and *G. sabulosus* are new to the fauna of Iran. The genus *Gastrosericus* has a worldwide distribution and includes 61 species ([Pulawski, 2020](#)). Recently [Jahantigh et al. \(2017\)](#) listed 315 species of Crabronidae from Iran of that 125 species were recorded from Fars province (south-west Iran) and 65 species from Sistan-o Baluchestan province (south-east Iran). Further studies now confirm 181 species known from Fars province ([Sadeghi et al., 2016, 2018a, 2018b, 2019](#); [Khosroabadi et al., 2019](#); [Rezaei et al., 2020a, 2020b](#)). The number of Crabronidae species from Iran increased from 364 to 366 by the findings published in the present study. Among different identified species, *Gastrosericus funereus* with 242 specimens had the highest population density while *Ammatomus coarctatus* and *Liris festinans praetermissus* with only one specimen had the lowest. Also *G. sabulosus* that has been reported for the first time from

Iran (South of Kerman, Kahnuj, Manujan and Qaleh-Ganj), already have been reported from Arabian Peninsula, Senegal and United Arab Emirates. With regard to geographical distribution of this species and the fact that this species distributed in warm climatic conditions and similar habitats, it is concluded that this species has been adapted to warm climatic conditions.

Acknowledgments

This research was supported by Shahid Bahonar University of Kerman which is greatly appreciated. Our special thanks are expressed to Mr. Mohammad Purrezaali and Mrs. Maryam Changizi for helping us in sample collection.

چکیده: در مطالعه حاضر داده‌های جدیدی در مورد پراکنش ۲۷ گونه از زنبورهای حفار (Hymenoptera: Spheciformes: Crabronidae) جمع‌آوری شده از مناطق مختلف جنوب استان کرمان، جنوب شرقی ایران ارائه شد. نمونه‌ها با استفاده از تله مالیز در ۲۱ منطقه از اسفندماه ۱۳۹۵ تا شهریور ۱۳۹۶ جمع‌آوری شدند. گونه‌های شناسایی شده متعلق به سه زیرخانواده *Bembicinae* (سه جنس و هفت گونه)، *Crabroninae* (هفت جنس و ۱۸ گونه) و *Philanthinae* (یک جنس و دو گونه) می‌باشند. دو گونه *Gastrosericus moricei* E. Saunders, 1910 و *G. sabulosus* Pulawski, 1995 برای فون ایران جدید هستند. مشخصات مرفولوژیک به همراه تصاویر مربوط به دو گزارش جدید برای ایران ارائه شد.

واژگان کلیدی: بال غشاییان، زنبورهای حفار، Crabronidae، گزارش جدید، ایران
